

## The RayCube RC4 is a high-end fully immersive Telepresence studio designed for the most common meeting profile of between 4 and 5 people.

Telepresence technology is now extremely reliable. The focus is how to create a great user experience.

The RayCube is a holistic solution that integrates the technology into a fully immersive environment ensuring the user remains fully focused on the meeting.

Video collaboration is now considered mainstream for IT management and is being integrated into the corporate communications strategy. Video is changing the way we work; enabling a more efficient and productive working environment.

The RayCube family of products address the challenges management face by providing a cost effective fully immersive holistic Telepresence environment.

The RC4 is the second immersive telepresence studio in the RayCube family, it offers an extended number of seats, compared to the RC2. The additional space provides more flexibility and the integration of additional feature like built-in printers or scanners.

The interior design is focused purely on providing the finest immersive experience. Strategically positioned glass elements create the relaxed feeling of space and openness, whilst maintaining a secure environment.

The RayCube products have been designed by leading experts in video communications. They have used their extensive knowledge to design products perfectly suited to customer's needs.

# RC4 Technical details

## Dimensions

W: 3.45m D: 3.45m H: 2.45m

## Space requirements

Minimum ceiling height 2.8m

## Connections

A single power outlet and a standard Ethernet network port are all that is needed to connect the RC4 to the videoconference network.

## Available Options

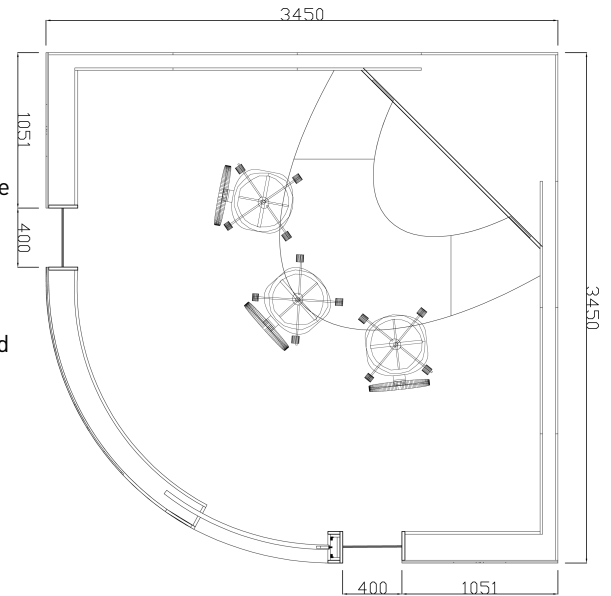

Multimedia screen, Booking screen, Chairs, External floor lighting, Integrated air-conditioned and External branding. Note: VC equipment and screen not included.

## Customised Approach

The RC4 is designed with standard interior colours; however each unit can be tailored to a client's individual choice of colour and corporate identity. This bespoke design would also include the carpet, seat and acoustic fabric, and would not incur any extra costs. The RC4 is finished in a high quality white coating, but exterior bespoke designs and corporate branding can also be applied at an additional cost.

## Project Management

The RC4 will be built using the customers' own preferred choice of videoconferencing equipment. We will work with your technology provider to ensure a seamless installation. All equipment; including audio speakers, microphones and screen (recommended size 52" up to 55") will be integrated into The Cube. This will ensure quality and reliability, and remove any technology concerns from users.

## Build and Installation

The RC4 is built in Germany by highly skilled craftsmen. Each unit is hand built and assembled in the factory where each component is quality checked. Once the unit has passed the vigorous checks, it is dismantled and packed for shipping.

The RC4 is shipped directly to the installation site and met by a team of highly trained experts who will then assemble The Cube.

The installation is scheduled for one day. During the installation the Terenci team will work with the videoconferencing technical provider to ensure the technical equipment is integrated correctly.
